

Limited Time Offer :

Japan's First InFlight Unlimited Video Streaming Service Launched by J-AIR

Commemorating the Completion of Inflight Internet Installation on All 14 Embraer 190 Aircraft (E90)

Osaka, JAPAN - J-AIR, based at Osaka International Airport (Itami), the regional airline for Japan Airlines (JAL) group, has been the first in Japan to offer inflight internet services on regional aircraft (small aircraft with less than 100 seats) since December 2022. The airline has announced that by July 11, 2024, this innovative service will be available on all 14 Embraer 190 aircraft (E90) operated by J-AIR, following the completion of antenna installation work.

To commemorate this milestone, J-AIR will launch the "J-AIR Unlimited Video Streaming Service" from July 12 to September 30, the first for a Japanese airline. This service is made possible with the cooperation of Intelsat, allowing passengers to watch video streaming onboard the Embraer 190 aircraft (E90). In addition to the existing inflight internet services that enable the use of the internet, email, and social networking services through inflight Wi-Fi, passengers can now enjoy unlimited video streaming for free during the service period, making their flight experience even more comfortable.

Shunsuke Honda, President of J-AIR said: "I tried watching my favorite movie during a test flight and the 2-hour journey felt incredibly short. We are looking forward to everyone experiencing this service and are excited about welcoming more passengers aboard J-AIR flights.

John Hopkins, Director, Airline Partnerships, APAC at Intelsat said: "Technological innovations are delivering higher capacity satellite communications to J-AIR flights. Intelsat's reliable satellite connectivity will soon provide smooth use of email, streaming services and social networking for all passengers. We are confident that J-AIR passengers will be satisfied with this new service."

■ Service Details:

Content: Video streaming available through in-flight Wi-Fi connection.

Period: July 12 to September 30, 2024.

Applicable Aircraft: Embraer 190 aircraft (Not available on Embraer 170 aircraft)

Operating Routes:

Some flights between Tokyo (Haneda) and Misawa/Akita/Yamagata/Yamaguchi Ube/Miyazaki, Osaka (Itami) and Sendai/Kagoshima, etc.

JAL Group plans to further enhance the in-flight Wi-Fi service by increasing the speed of connectivity on domestic flights and offering free access on international flights in the near future. By continuing to explore diverse inflight experiences, this commitment aims at enhancing convenience and comfort for passengers, while innovating to add new value to air travel experiences.

About J-AIR

J-AIR, serving as the regional airline for Japan Airlines (JAL) group, is headquartered at Osaka International Airport (Itami). The airline operates regional jet flights throughout Japan, extending from Memanbetsu in Hokkaido in the north to the Amami Islands in Kagoshima Prefecture in the south, and numerous locations in between. Dedicated to revitalizing the flow of people and logistics, J-AIR commits to providing high-quality, friendly services and an air network that meticulously connects local regions.
